

## **Metalac AD will use Auconet BICS to control, secure and manage their Business IT Network**

**Berlin, January 15, 2021 – Metalac AD will use Auconet BICS (Business Infrastructure Control System) to control, secure and manage their business IT network. Metalac AD from Gornji Milanovac, Serbia, is a regional market leader in manufacturing fine cookware. Metalac AD is best known for enameled, stainless steel and non-stick cookware exported to more than 25 countries worldwide.**

With permanent strategy of adaptation and investment into personnel and new technologies, Metalac AD manages to keep their leading position in the market. The business processes run on the Infor LN as ERP platform to facilitate permanent innovation, growth and competitiveness.

“We have enabled our business with Infor platform and now enabling our IT with Auconet BICS. We believe that our personnel will have solutions that will elevate their daily work to the next level”, says Mr. Vojin Vukadinović, Executive director for R&D, IT and Marketing

IT Division supports production, distribution and sales through the centralized business infrastructure network. They recognize Auconet BICS as a solution that creates the highest levels of transparency and control, that monitors critical resources, and automates management tasks to gain full control of the business infrastructure.

“We have evaluated BICS in a month and half long Proof of Concept. From the very start we could realize that BICS makes all our network visible and manageable from a single of point control. That makes it possible for us in IT to discover, manage and protect all our scattered and diverse business infrastructure from the HQ. We were also very happy with the support provided by Auconet consultants.” says Mr. Slobodan Rajčić, Manager of IT Support.

End of the message

### **About Auconet**

Auconet was founded in 1998 by a German engineering team with many years of experience in IT Operations Management. The company provides solutions for information technology, network management, network security, IT infrastructure management, cloud, network automation and business infrastructure management.

Auconet BICS is the next-generation ITOM platform for controlling large and heterogeneous corporate networks. BICS not only offers network infrastructure management for all devices and end devices of the manufacturers, but also serves as a basis for a new generation of IT infrastructure management.

Auconet has been part of the Beta Systems Group since the beginning of 2018.
